

UNCHAIN

Company Deck

UNCHAIN Inc.

July 2026

Everything Starts from Japan.

Our mission and vision

UNCHAIN

MISSION

UNCHAIN THE WORLD

Every organization, and every person, has a MISSION they want to achieve.
In reality, few ever get to fully pursue it.

Too little time and too few hands, scattered knowledge, complex organizations,
the way things have always been done — the hours that should go to your mission
are consumed by daily constraints. We call this state being bound in CHAINS.

Technology — above all AI — exists to break those CHAINS.

Unchain the potential of people and organizations; unchain each MISSION.

Piece by piece, that is how the world itself becomes unchained.

U N C H A I N

Founding Team

Founder & CEO

Sunwoo Park

Co-founded a company named to Forbes' "Top 50 AI Companies in Japan"; AI security research featured in Forbes. AI researcher at the University of Tokyo's Matsuo Lab. Youngest-ever admit to SoftBank Academia. Panelist at the U.S.-Japan Council.

Co-founder & COO

Taizo Harada

Co-founded an outdoor-gear company at 15 and grew it to 400+ retail locations in four years, then exited. Studied in the U.S. on multiple scholarships. Multiple-time winner of pitch competitions hosted by Fortune 500 companies. Ex. Nomura, and Protivti Intern.

Co-founder & CTO

Lui Ebina

Full-time engineer straight out of junior high school. Led NTT West's nationwide data pipelines and a B2B platform digitizing government records. Designs and ships new products end to end. Graduate of 42 Tokyo.

Technical Advisor

Toshiharu Saito

Worked on Namco's Pac-Man and Sega's Dreamcast from his high-school years; later President & CEO of KDDI Technology. Currently Director & CTO at Ascon Inc.

Our Solution

The problem: AI doesn't know your business

Generic AI answers from the internet — not from how your company actually works.

PROBLEM 01

Knowledge is scattered

Decisions, fixes, and lessons live across chat, email, minutes, and spreadsheets — and in people's heads.

PROBLEM 02

AI can't reach it

Without your context, even the best AI returns generalities — and guesses on exactly the questions that matter.

PROBLEM 03

Experts walk out the door

When people retire or move on, the “why” behind their judgment calls leaves with them.

UNCHAIN

SOLUTION

NEURON

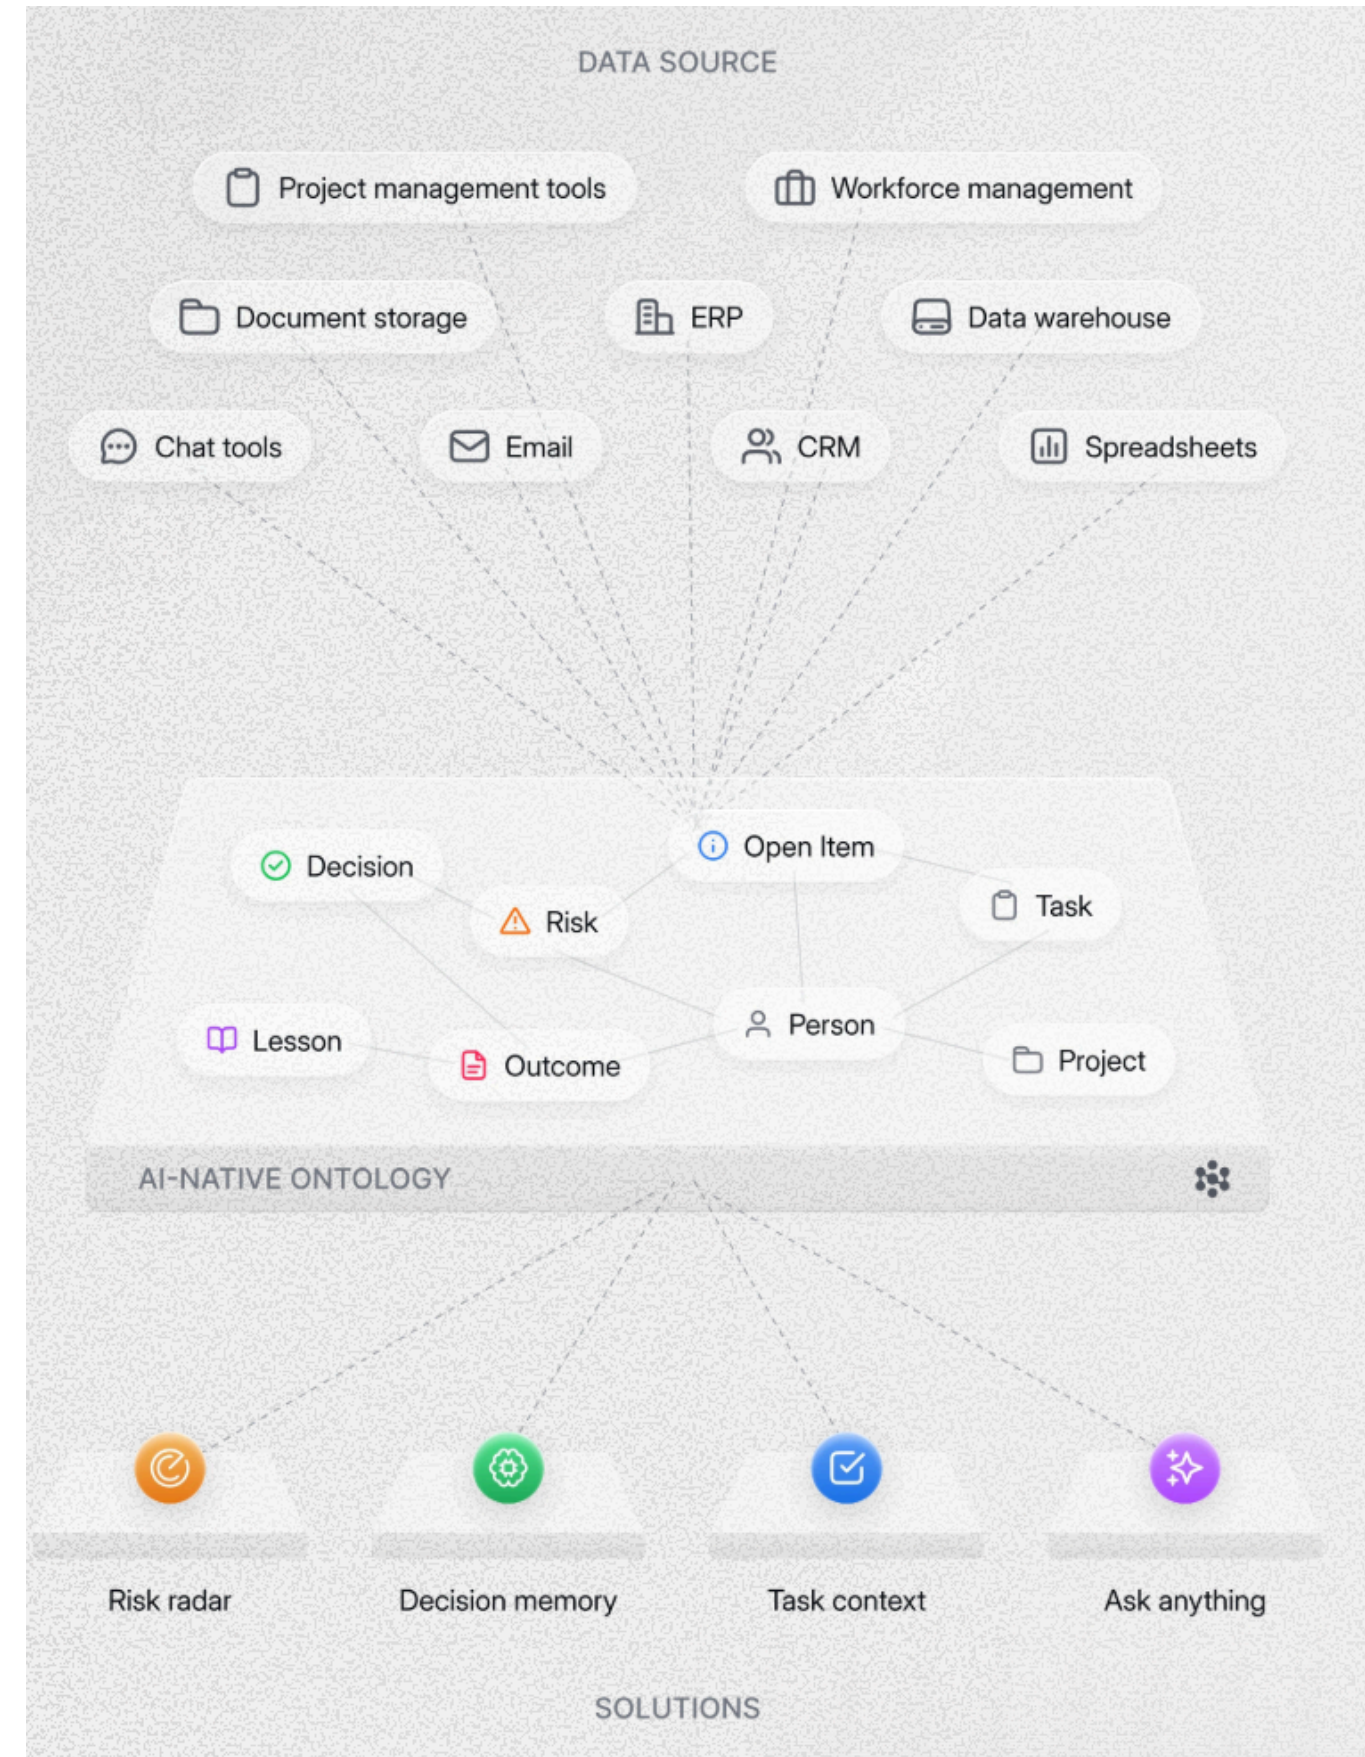

Structures your organization's knowledge. Grows with it.

Turn one person's judgment into organizational strength.

the-neuron.com

NEURON organizes the all your organization's knowledge scattered across your company into a history of decision-making — showing how the organization really moves.

From words in your tools to structured knowledge.

① INPUT • everyday tools

- Outlook (email)
- Microsoft Teams (chat & meetings)
- Slack • Chatwork (chat)
- Word • Excel • PowerPoint (documents)
- SharePoint • OneDrive (files)
- kintone • Garoon (workflows)
- Zoom • minutes (meeting records)

② NEURON understands

NEURON

- ① Understands words in context
- ② Reads links between sentences
- ③ Connects "who, what, how far" by cause & effect
- ④ Structures knowledge (ontology)

→ straight into **purpose-built drafts**

③ OUTPUT • knowledge

Structured knowledge report

(ontology output)

A map of organizational knowledge & activity

Ontology — a 50-year-old idea, finally practical

1970s — 2020s

The right idea

An ontology is a map that connects knowledge by shared meaning. For fifty years it was recognized as the right approach to organizational knowledge.

THE BOTTLENECK

Why it rarely shipped

Formalizing expert knowledge took months, definitions drifted between teams, and the cost always outweighed the payoff.

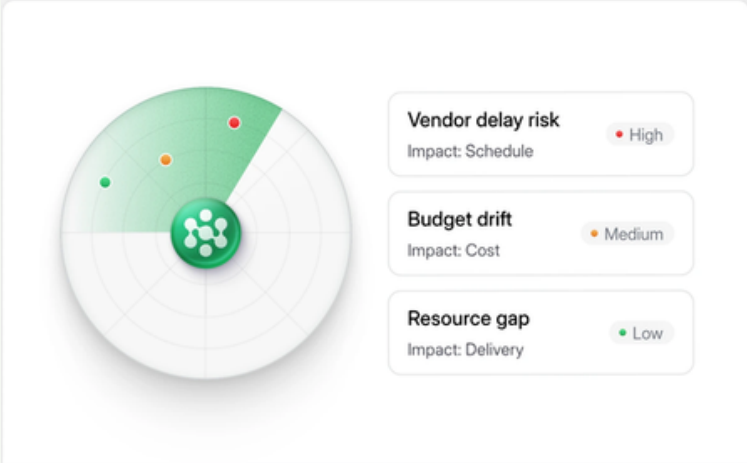

NEURON — TODAY

Built automatically

NEURON builds and updates the ontology automatically from your everyday tools — no experts, no months of setup, always current.

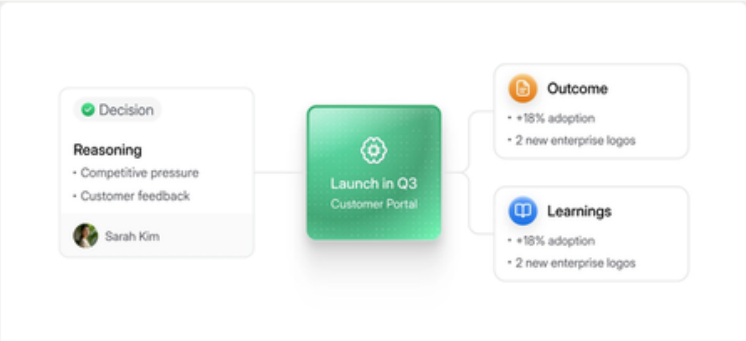

Our innovation: **answers that follow the connections** — impact, cause, and reasoning, with sources.

Four things NEURON does for you

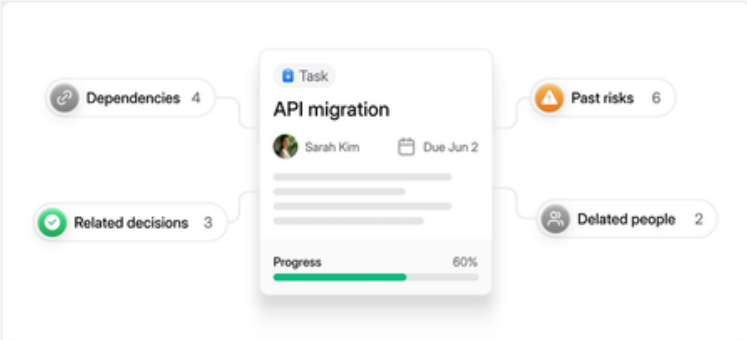

Risk Radar

Monitors signals in conversations, meeting notes, and task updates — catching risks before they escalate.

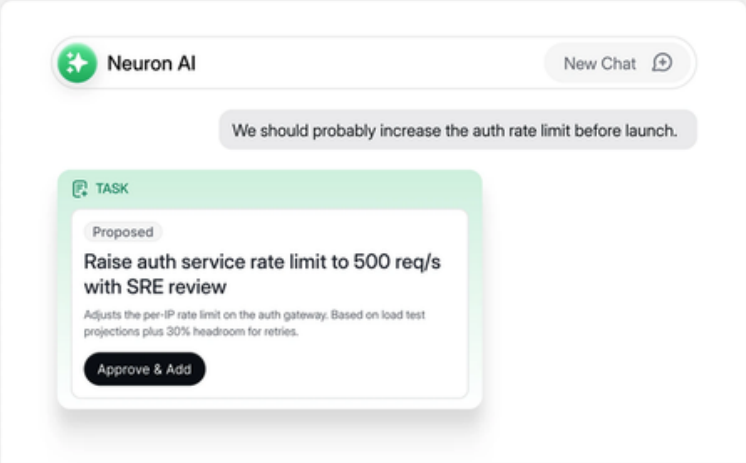

Decision Memory

Every decision is automatically recorded and linked with its rationale and outcome. Full traceability, no manual minutes.

Context for every task

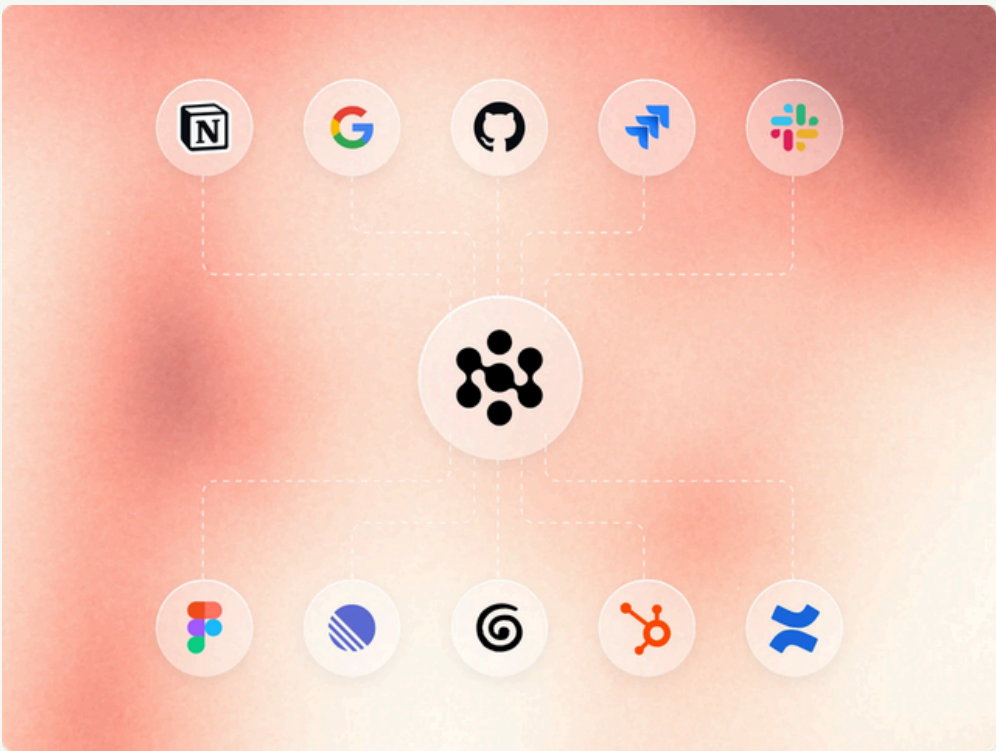

Open any task and instantly see the background, past decisions, dependencies, and who to ask.

Ask anything

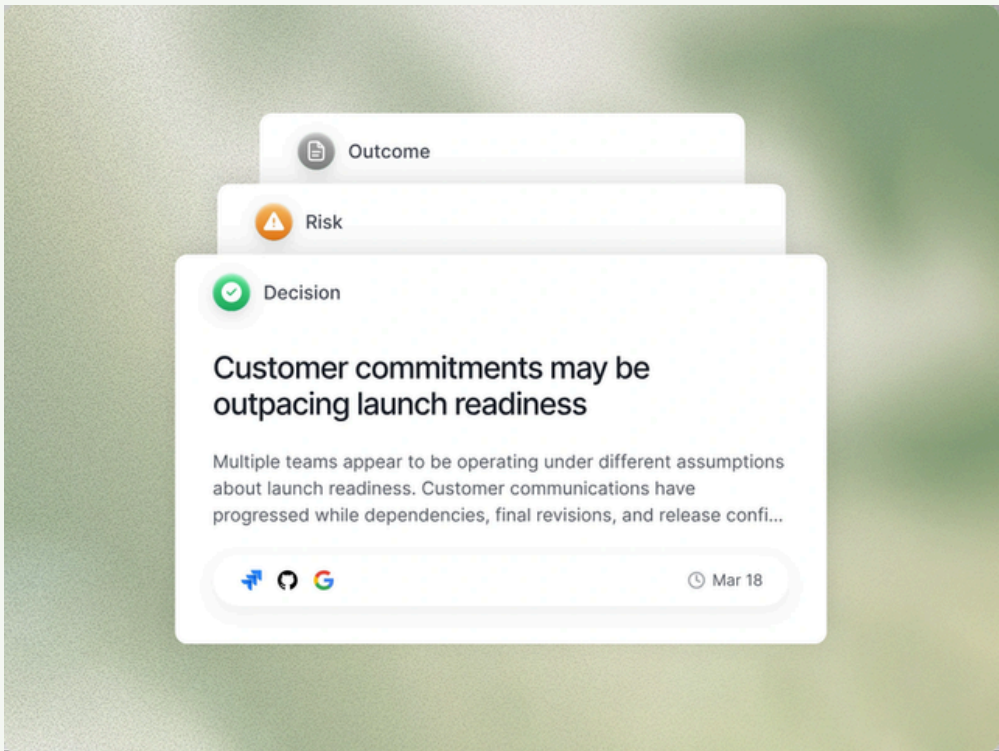

Ask in plain language and get answers grounded in your organization’s actual history — with sources.

Setup takes just three steps

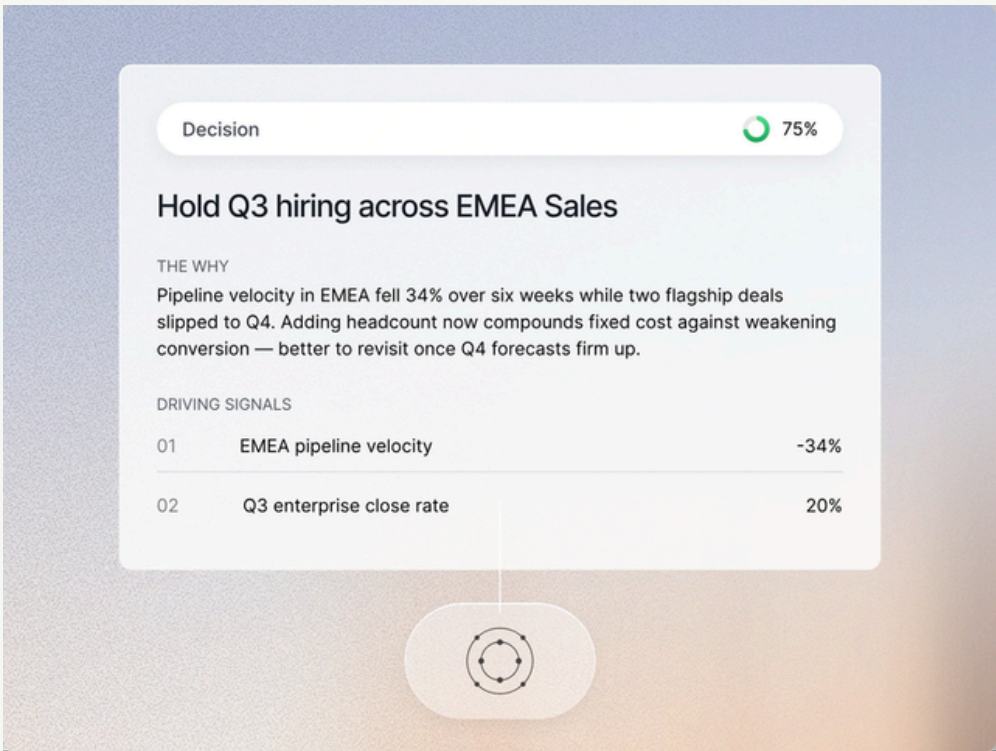

01 Connect your tools

Link chat, project management, docs, and email — read-only, respecting your existing permissions.

02 NEURON structures

Signals automatically become connected decisions, risks, and outcomes that mirror how your company actually works.

03 Everyone gets what they need

Risk and decision support for managers, the “why” for leadership, and full task context for teams.

NEURON becomes the memory of AI agents

Not beside your AI — beneath it. The foundation that supplies “this company’s context” to every AI.

L3

AI agent layer

Claude / GPT / Copilot / task-specific agents → proposals and actions grounded in company context

L2

NEURON — your organization’s context layer

Structures discussions, decisions, and outcomes into a company memory that AI can reference

L1

Data sources

Slack / Teams / email / meeting notes / wiki / decision history → your company’s raw context

UNCHAIN

SOLUTION 02

AI Advisory

A dedicated AI advisor for leadership and the front line.

Why an advisor from UNCHAIN

We don't commentate — we accompany you, with practitioner knowledge.

Advice from the people who build.

There is a difference in resolution between recommending AI — and building and operating it yourself.

01 An advisor with a product

We build and operate NEURON ourselves — structuring organizational context in production, not in theory. Advice grounded in implementation reality.

02 Research × implementation

AI research at UTokyo's Matsuo Lab, Forbes-featured AI security research, nationwide-scale data infrastructure. We know both the theory and the field.

03 Vendor-neutral judgment

We resell nothing. We work backwards from your operations, context, and literacy to the right stack.

04 Capability that stays

Not deliver-and-leave consulting. The goal: people and culture inside your organization that can wield AI.

The six walls between companies and AI

Tools keep launching and teams keep experimenting — yet results and retention stay out of reach, for the same six reasons.

01

Can’t judge what to adopt

New tools appear weekly; fit is impossible to assess from outside.

02

No business results

The front line runs pilots, but the numbers don’t move.

03

No time to learn

Neither executives nor staff can study AI systematically.

04

Safety concerns

Security and governance worries block full-scale rollout.

05

No one to ask

No AI expert in-house you can casually consult.

06

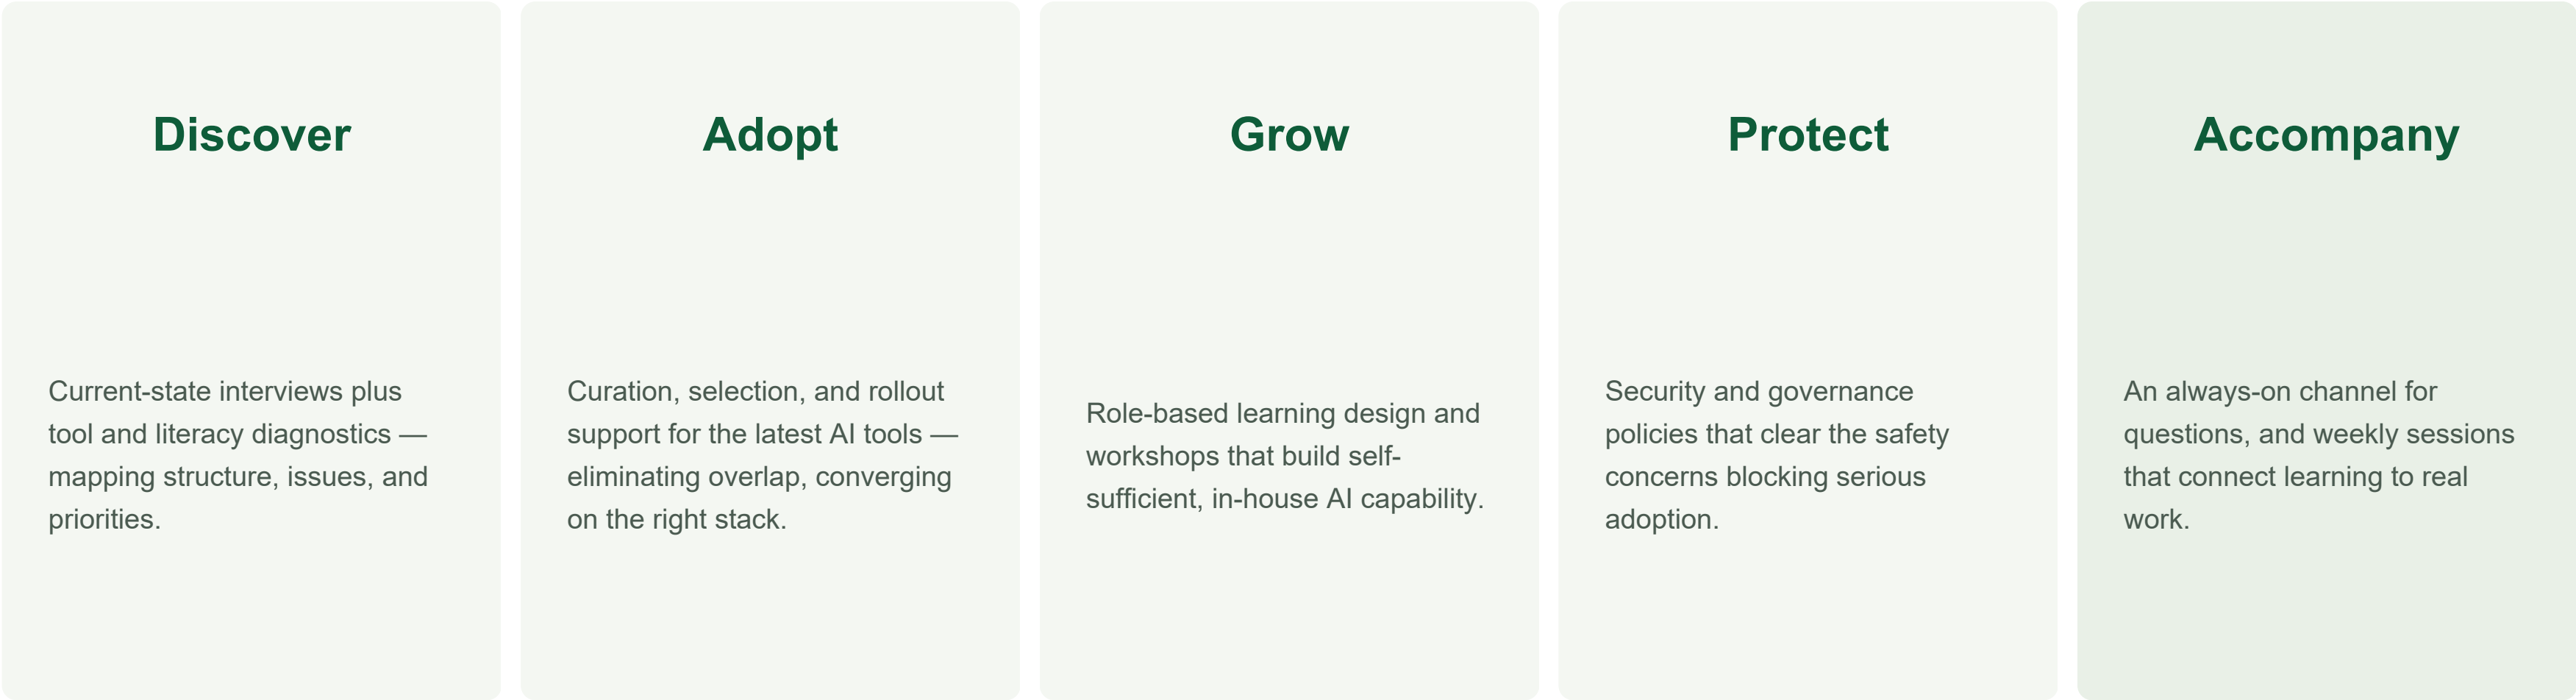

Skills don’t stick

Ad-hoc “sort of using it” never becomes organizational capability.

A dedicated companion — your AI advisor — answers all six.

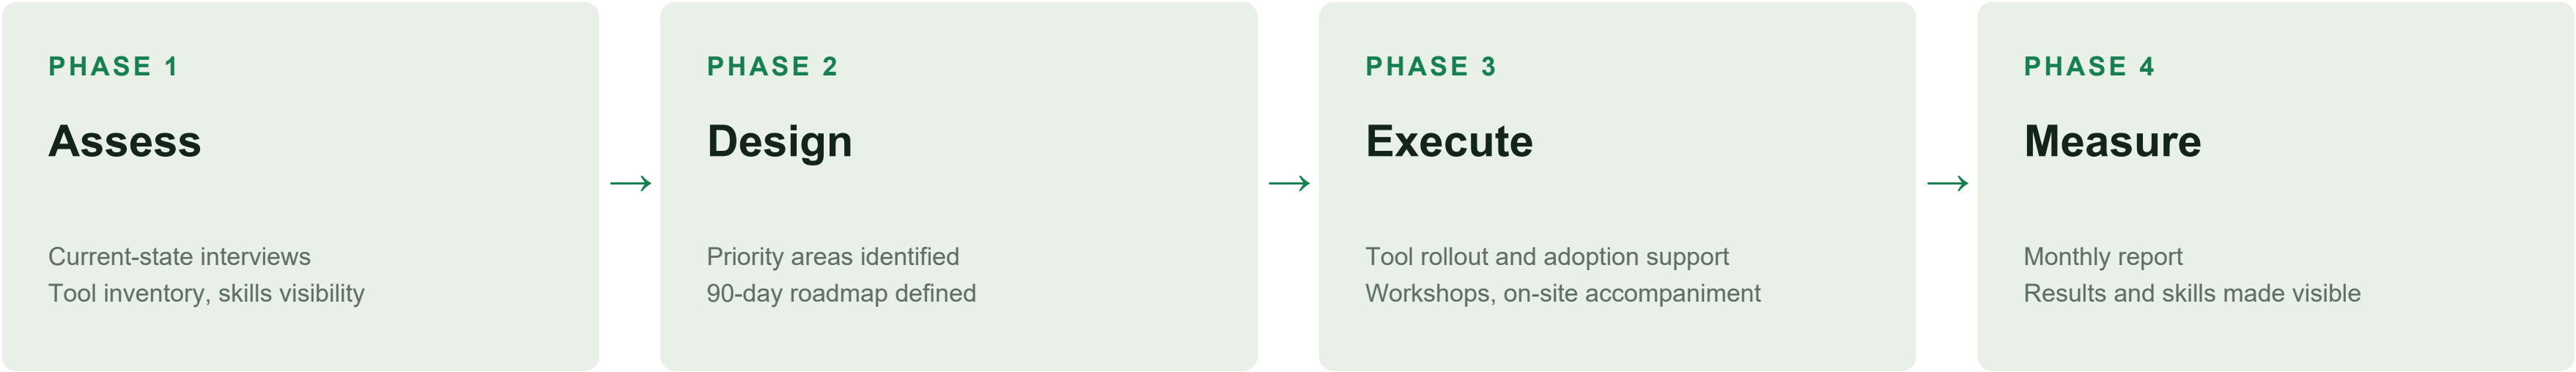

Five functions, one hands-on advisor

Your dedicated advisor learns your company deeply — from assessment to lasting adoption.

Not one-off consulting — the goal is people and culture inside your organization that can wield AI.

A continuous cycle: Assess → Design → Execute → Measure

How we accompany our clients

Weekly 90-minute strategy session

Review progress and application together, and decide the next moves.

Always-on dedicated channel

Immediate answers on tools and practice — no more “no one to ask.”

Monthly report

Usage, skills acquired, and business results — in numbers.
